| => SDLC | => ASP.NET SignalR | => WCF |
| => SQL Performance Tuning | => StyleCOP | => FXCOP |
| => Absolute Freshers | => JQuery | => Javascript |

In Web forms this can be achieved with the help of Http Handlers.

View Our Complete Video List!!! (<https://www.questpond.com/totalimages.html>)

OR Order Now!!! (<https://www.questpond.com/ordernow.php>)

1. In your web form project create a new Generic Http Handler. Right click the project, Add new Item
>> Generic handler (file with ashx extension)

2. In the ProcessRequest function create and return JSON string as follows

- a. Create object of your .net class and initialize properties with values.
