8. What is the syntax to link external style sheet?

External style sheet comprises of style description that can be linked with the HTML document externally. To keep style separate from the structure, External style sheet is one of the best and organized way

best and organized way.

The syntax for using link External style sheet is as follows :

```
<HTML>
<HEAD>
<LINK REL=STYLESHEET HREF="Test.css" TYPE="text/css">
</HEAD>
</HTML>
```

9. How embedded style can be linked with HTML documents?

Embedded style can be implemented within HTML code. It is written using the <Style> tag and used under the <Head> structure.

The syntax of it is as follows :

```
<HEAD>
<STYLE TYPE="text/css">
style {text-indent: 15pt;}
style1{text-color: #060000;}
</STYLE>
</HEAD>
```

10. Why imported is an easy way to insert the file?

Imported style sheet permits you to import the files which are external or combine one style sheet with another. There can be created many files, different style sheets to have different functions. Import function gives the provision to combine many elements or functionality into one. The syntax to import any file is @import notation, which is used inside the <Style> tag. There is a one rule that implies that the last imported sheet will override the previous ones.

The syntax is shown by coding as :

```
<Link Rel=Stylesheet Href="Main.Css" Type="Text/Css">
<STYLETYPE="text=css">
<!--
@import url(http://www.vyz.css);
```

```
@import url(http://www.xyz.css);
... your code
->
</STYLE>
```

The <!-- --> is used as a comment for those browsers that doesn't support CSS.
