Description

Angular JS is one of the JavaScript open-source web application frameworks which is generally used to add an HTML page along with a tag. The major aim of Angular JS is to simplify the application development and testing performance by providing a framework called MVC (Model View Controller) Architecture. It enables

the application to change from bulk
amount of programming code into a simple
code

AngularJS Training Objectives

- The main objective of Angular JS is to reduce the code to build user interface applications
- To create single page applications
- To restore data from back-end server and manipulate it easily

Who should do the course

- Web Developers
- Software Professionals with knowledge in Java Script
- Student/Fresher's with knowledge in web development technologies
- JAVA developers
- HTML developers
